TREMONT NETWORK VIDEO RECORDER (NVR) SYSTEM FOR SECURITY CAMERAS
2008 PILOT YEAR PROGRAM

What is the NVR?

The Tremont Network Video Recorder (NVR) is a computer-based video recorder designed to store and retrieve recordings from security cameras. The NVR is housed at Tremont West Development Corporation's offices. This device uses WebEye Alert NVR+ software to manage recordings and retrieve live and recording images via a web browser. The NVR can support up to 16 cameras and 10 days or recordings.

I've been hearing about this for months…is the system up and running yet?

Yes • The system's initial cameras have been installed and the recorder is functioning properly. The NVR system is ready to accept more participants.

Are there any rules and regulations?

You Bet • The NVR is administered by the Tremont West Safety Committee of the TWDC Board of Directors. Generally access is limited to the Safety Committee, Law enforcement and camera owners.

Do I purchase my own camera?

Yes • Your group or business is responsible for purchasing and installing the camera. <u>TWDC does not provide or install the camera</u>. Generally speaking, the Tremont NVR system supports cameras that range from $250 to $1,000.

Again, the camera must be installed before you or your group may connect to the Tremont NVR.

Okay…then what am I paying for?

Here's a brief list of the advantages of connecting to the Tremont NVR?
- The Tremont NVR system supports all major network cameras
- Users can access live and recorded images via the internet
- The Tremont NVR system can capture video and still images

This sounds great…how much does it cost?

➢ There's a one-time $75 setup fee (which connects your camera to the system).
➢ We also charge a monthly maintenance fee of $10 (per camera).
➢ Fees will be administered by TWDC.

*NOTE: This fee structure is for the 2008 Pilot Program only. Fees may be adjusted in 2009.
